

## Patent Abstracts of Japan

TITLE : TELEVISION SIGNAL RECEIVER

**CONSTITUTION:** A tuner 2 demodulating the television signal of the plural channels to a video signal and an audio signal, a video demodulating circuit 3, and an audio multiplex demodulating circuit 5 demodulating a domestic audio multiplex signal are equipped. And it is detected from the discriminating signal of the domestic audio multiplex signal under receiving whether an audio broadcasting is a stereo mode or a bilingual mode, and the channel is switched to the state receiving the other channels while the discriminating signal changes. Thus, when the program of the channel to be watched becomes the commercial broadcasting, it is switched to the state receiving the other channels automatically, and when the commercial broadcasting is finished, the channel is switched to the original one automatically.
